

PROJECT IDEA & VALIDATION REPORT

1. Project Overview

1.1 Project Title

Remind IT

1.2 Project Category

Productivity App

2. Project Idea

2.1 Introduction

2.1.1 Project Description:

Our reminder app is a smart and customizable productivity platform designed to help people manage their tasks, deadlines, appointments, and daily responsibilities more effectively. Unlike traditional reminder apps, users can personalize their experience by adding different reminder plugins based on their individual needs. Our goal is to make remembering important things simpler, smarter, and more flexible.

2.2 Target Users

Students

Working Professional

Busy Individual

3. Problem Identification

3.1 Problem Statement

People often forget important tasks, deadlines, appointments, and responsibilities because traditional reminder apps are too simple and offer the same experience for everyone. Users have different reminder needs, but most existing apps do not provide enough flexibility or customization. This creates a need for a smarter and more personalized reminder system that can adapt to each user's lifestyle and requirements.

3.3 Problems with Existing Solutions

- Lack of flexibility and personalization
- Different user needs are not well addressed
- Limited reminder types
- Limited customization

3.4 Impact of the Problem

- Missed deadlines and important tasks
- Increased stress from trying to remember everything
- Frustration caused by limited customization
- Wasted time setting up and managing reminders

4. Proposed Solution

4.1 Solution Overview

- One platform to manage different types of reminders
- Flexible plans with essential features for free users and advanced features for premium users
- Helps users stay organized and productive
- Simple and user-friendly interface
- Plugin-based approach

4.2 How the Solution Works

Step 01: Chose a suitable plug in

Step 02: Set up reminder

Step 03: Customize the Reminder

Step 04: Receive notification

Step 05: Manage and Track

Step 06: Add more plug ins when needed

5. Project Validation

5.1 Purpose of Validation

- Identify your target audience
 - Identify whether people actually struggle with forgetting tasks
 - Check whether users are interested in customizable/plugin-based reminders •
- Find problems with existing reminder apps

6. Validation Method

6.1 Method Used

- **Google Form**
- **User interview**

6.2 Target Audience

Busy Students

Young adults

6.3 Number of Participants

Total Responses: 33

6.4 Validation Period

From: 24/08/2026

To: 31/08/2026

7. Validation Questions

1. What best describes you?
2. How often do you need to remember tasks, deadlines, appointments, or other important things?
3. How many important things do you usually need to remember in a typical week?
4. How often do you forget something important?
5. What kinds of things do you usually forget?
6. What usually happens when you forget an important task?
7. How stressful is it for you to keep track of everything you need to remember?
8. What do you currently use to remember important things?
9. What problems do you face with your current reminder/task-management method?
10. How satisfied are you with your current method of remembering things?
11. Which types of reminder features would be useful to you?
12. What would make you choose a new reminder app instead of the one you currently use?
13. Which pricing model would you prefer for a reminder app?
14. Would you pay for specialized reminder features if they provided significant value to you?
20. If you could change one thing about the way you currently manage reminders, deadlines, or tasks, what would it be?
21. Is there anything you wish your current reminder/task-management tools could do that they currently don't?

8. Validation Form

Google Form

Form Title:

Task and Reminder Management Survey

Form Link:

9. Validation Results

9.1 Response Summary

Category	Result
Total Participants	33
Confirmed the Problem	46.7%
Interested in the Solution	67.4%
Willing to Use the System	46.7%
Recommended the Idea	56.3%

9.2 Key Findings

Based on the collected responses:

- **Participants often forget personal tasks**
 - **Most of them find forgetting tasks stressful**
 - **Most of the participants currently rely on their memory to remember tasks**
- Participants would find study or exam reminders useful**

10. Changes After Validation

Based on the feedback received from potential users, the following changes were made to the project idea:

Feedback Received	Change Made
41.2% say simplicity is the top reason to switch apps	Simplified onboarding and UI, limiting free tier users to 2 active plugins to avoid clutter
20.6% find notifications overwhelming	Introduced customizable notification frequency and priority levels per plugin
17.6% want more customization	Made customization a key premium-tier feature rather than a minor setting

This section demonstrates that the team **used the validation results to improve the project**, rather than simply collecting responses.

11. Validation Evidence

11.1 User Discussion

Photo:

Caption:

Discussing the identified problem with potential users.

12. Validation Conclusion

Based on the feedback collected from potential users, the team evaluated the relevance of the identified problem and the usefulness of the proposed solution.

Validation Result

- ☐ **Strongly Validated**
- ☒ **Validated with Improvements**
- ☐ **Requires Further Validation**
- ☐ **Not Validated**

The validation confirms a real, painful problem and genuine gap in existing tools (memory, notes apps, self-messaging). Feature interest and pricing preferences align with the proposed app.

Final Decision

- ☒ **Proceed with Development**
- ☐ **Modify the Project Idea**
- ☐ **Conduct Further Research**
